

The TEKMERIS Protocol™

Independent witness verification for supply chains
and healthcare facilities

The batch number is a claim. The witnessed record is the evidence.

The gap between a claim and a witnessed record.

ON PAPER

A batch number. A label date.
A supplier document.

These can describe the goods being offered.
They do not, by themselves, record which
production activity was observed.

AT THE LINE

Record the production batch, date,
scope and exact covered packages.

Define what needs to be observed before production is relied on.

A laboratory report describes an identified sample.

The source, the sampling record and the connection to the production batch all matter.

THIRD-PARTY EVIDENCE

LABORATORY REPORT

Separate third-party document

01 SOURCE

Who issued the report, and what was tested?

02 SAMPLE

Who selected the sample, and what was recorded?

03 CONNECTION

How does the sample relate to this production batch?

A sample result does not mean every sealed package was tested.

Two reports. Clearly separated responsibilities.

Laboratory testing is optional, separately charged, and outside TEKMERIS's observation engagement and report.

01 / AGREE

Choose the laboratory

The client chooses a laboratory, or asks TEKMERIS for recommendations. A recommendation is not a guarantee of competence or suitability.

02 / DISPATCH

Factory sends the sample

The factory sends peptide samples to the laboratory under client instructions. TEKMERIS may coordinate but does not physically store or take custody of peptide products.

03 / REVIEW

Review the connection

The laboratory issues its own report. Its source and sample-to-batch relationship are reviewed before any authorised linkage to an observation record.

Proposed record experience: approved public summary; full reports on request, subject to permission. Later evidence updates the assigned record without replacing the QR code.

**A sample result describes
the sample that was tested.**

**A witnessed record connects
the batch to the covered packages.**

Dated observations. Controlled sealing. Exact package assignments.

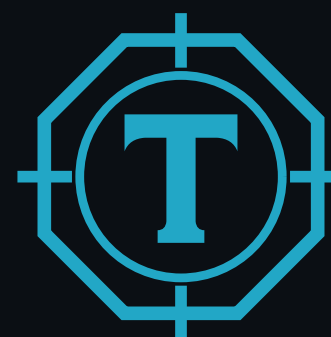

On-site verification. Findings recorded independently.

**BUYER
PRODUCER
FACILITY**

WHO COMMISSIONS

A buyer, producer or facility operator may commission work, including for its own premises or production batch.

TEKMERIS

FIELD OBSERVER

TEKMERIS attends on the agreed date and distinguishes direct observation, supplied information and public-record checks.

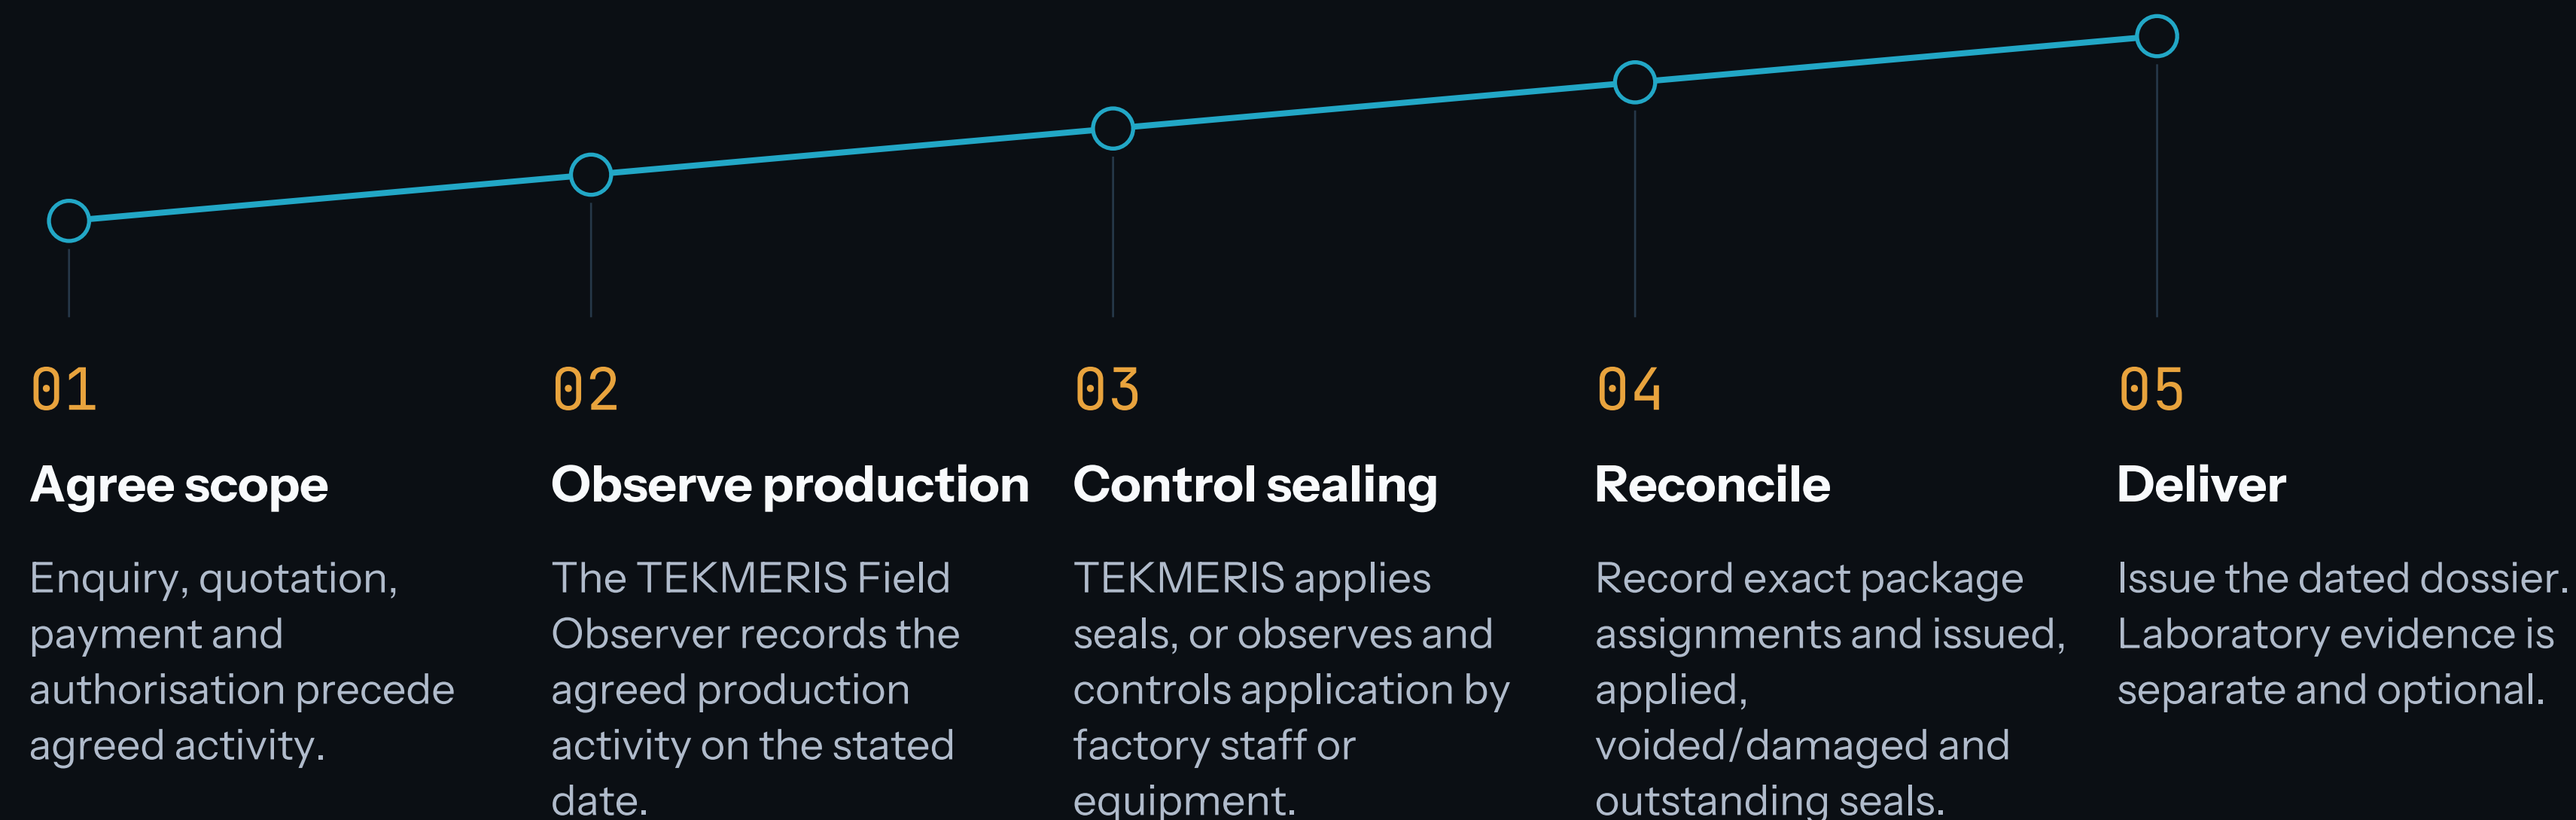

**AGREED
BATCH / SITE**

DEFINED SCOPE

The agreed fee pays for the work, not a favourable finding. Acceptance depends on access, scope, competence and conflicts.

From agreed scope to a defined record.

The observation and sealing engagement can complete without laboratory testing, subject to its other release requirements.

Premises and healthcare facilities.

A DATED VISIT. AN AGREED SCOPE.

TEKMERIS records what was observed in agreed areas. Any registration check names its public source and date. Manufacturing premises retain their product annex; healthcare and wellness visits use H or W.

FACILITY BADGE / CONCEPT

Dated, scope-specific findings

Badge issuance awaits defined eligibility and validity rules. A visit alone does not confer one.

SEPARATE SERVICE

Guest observations

Unannounced guest observations are a separate service and do not earn a facility badge.

Not every “verified” means the same thing.

SUPPLY CHAIN

PREMISES & FACILITIES

WITNESSED	T Batch-specific record Dated observation and controlled sealing of the exact covered packages. Read the scope and package assignment.	Dated facility visit TEKMERIS attended and recorded scoped findings. A visit alone confers neither a badge nor accreditation.
DOCUMENTED	Laboratory evidence A report covers identified samples and tests. It does not independently establish the whole production batch or every package.	Public registration A register entry records registration. It is not evidence that TEKMERIS attended the premises.
NOT ESTABLISHED	Connection unconfirmed The package-to-batch relationship is not established by a label, date or document alone.	Visit unconfirmed No dated TEKMERIS visit is evidenced in the material reviewed. Do not infer verified status.

Separate evidence dimensions: laboratory testing is optional, not a prerequisite tier.

One standard. Seven annexes.

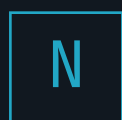

Defined scope, dated observations and explicit evidence limits across production and facilities.

PRODUCTS / THE SEAL

Peptides, APIs & Compounds

Scoped production observation and sealing

Nutraceuticals, Supplements &

Traditional Medicine

Cosmetics & Topicals

Production and packaging records

Olive Oil, Premium Foods & Beverages

Pressing, bottling and filling records

Medical Devices, Equipment & Supplies

Defined-scope observation and traceability

FACILITIES / THE BADGE

ANNEX H

Hospitals & Healthcare Facilities

Dated observations within an agreed hospital area or service.

ANNEX W

Longevity Clinics, Med-Spas & Wellness

Dated observations within agreed wellness areas and services.

The dossier. The seal. The badge.

PRODUCT MOCKUPS / DESIGN CONCEPTS

AGREED ENGAGEMENT

The dossier

Dated findings and evidence limits.
Photographs where authorised.
For product work: package assignments
and seal-stock reconciliation.

COVERED PRODUCT PACKAGING

The seal

Links each covered package to its record.
Check the physical seal as well.
A lookup cannot inspect the seal
or prove the identifier is not copied.

FACILITIES / DESIGN CONCEPT

The badge

Subject to defined eligibility and validity
rules. A visit alone is not accreditation or
clinical-outcome assurance.

The fee pays for the work. Not the finding.

HOW WE WORK

Fees agreed in advance; not contingent on a favourable outcome.

Findings recorded independently of who commissions the engagement.

Acceptance checks lawful scope, competence, access, evidence and actual conflicts.

THE BOUNDARIES

TEKMERIS does not choose suppliers, sell goods or take factory commissions.

It does not hold goods, test in a laboratory or issue laboratory reports.

It grants no licences, regulatory approvals or clinical safety assurances.

Independent observations. Defined evidence. Explicit limits.

Start with access. Then agree the engagement.

STEP 01

YOU PROVIDE

The proposed scope

Your role, category, premises or production-batch details, timing and the site contact. State whether you need premises, a production batch, or both.

TEKMERIS PROVIDES

A written access-check quotation

Agreed activity follows payment and authorisation. The access result is recorded in writing; any full engagement is scoped separately.

A closed door is still a recorded result.

ACCESS REFUSED

RECORDED IN WRITING

If the site will not admit an independent observer, TEKMERIS records the refusal and the limits of what could be established.

A refusal does not, by itself, establish product quality or misconduct.

Put the record behind the claim.

A specified production batch. A dated visit.
A clear account of what was observed.

Start with an access check to establish the scope and what
the site will permit.

Witnessed production / Controlled sealing / Dated facility visits
